

Northwestern or just nonstandard?

Social Meaning of Kinyarwanda Morphosyntactic
Variation

Adam An & Jean Paul Ngoboka

Today we're talking about...

What **morphosyntactic variation** does Kinyarwanda have?

What **expectations** do Rwandans have about this variation?

What **facilitates** the acquisition of sociolinguistic knowledge?

Kinyarwanda

Bantu; ~10 million speakers
national lg. of Rwanda (East Africa)
agglutinative morphology

two variables under
study: negated *ra*- and
g-

Variable: **negated** *ra-*

ntaabwo ba-som-á
'They are not reading.'

MORE FREQUENT

ntaabwo ba-**ra**-som-á
'They are not reading.'

LESS FREQUENT

Variable: *g*-

u-mwe
'one'

MORE FREQUENT

gu-mwe
'one'

LESS FREQUENT

What social meaning do these variables have?

negated

ra-

g-

Methods

Survey

15 respondents, ages 23-59, all five regions from Rwanda represented

Self-reported usage and metalinguistic commentary

What do Rwandans say about these variables?

negated

ra-

g-

What do Rwandans say about these variables?

'I've heard it [negated
ra-] that way because
that's how we say it in
my hometown.'

(West; 25)

g-

What do Rwandans say about these variables?

'I've heard it [negated
ra-] that way because
that's how we say it in
my hometown.'

(West; 25)

'It's [*g-*] used by *ikigoyi*
speakers from the Northern
Province.'

(North; 59)

'[*g-*] is not good
Kinyarwanda.'

(East; 26)

What do Rwandans say about these variables?

negated *ra-* is

Northwestern and
young

g- is

Northwestern and
stigmatized

to the data! →

	mentioned awareness	mentioned Northwest	mentioned young	mentioned stigma	mentioned gender
<i>negated</i> <i>ra-</i>	13	3	4	1	0
<i>g-</i>	14	9	1	4	0

(N = 15)

fewer people have detailed social knowledge about
negated *ra*- than *g*-

	mentioned awareness	mentioned Northwest	mentioned young	mentioned stigma	mentioned gender
negated <i>ra</i> -	13	3	4	1	0
<i>g</i> -	14	9	1	4	0
					(N = 15)

How are these variables evaluated?

negated

ra-

g-

What are the surface distributions of these forms?

~~negated~~

ra-

g-

What are the surface distributions of these forms?

~~negated~~

ra-

ra- is pervasive

required in other
environments with other
functions

present in presumably all
Kinyarwanda varieties

(Ngoboka & Zeller 2017)

What are the surface distributions of these forms?

g- is absent from many
Kinyarwanda varieties,
including prestige varieties

(Ngoboka 2016)

g-

What are the surface distributions of these forms?

~~negated~~ *ra-*

most instances are
expected and socially
unmeaningful

only a few instances are
unusual

g-

always unusual

How are these variables evaluated?

negated *ra-*

hard to identify unusual *ra-*
from abundance of
socially-unmeaningful
instances

g-

easy to identify and assign
social meaning

Interface Principle

(Labov 1993)

sociolinguistic
evaluation only
targets surface
form, not
underlying
representation

Interface Principle

(Labov 1993)

prediction: forms
that are similar on
surface but
structurally
different →
similar evaluation

How are these variables evaluated?

negated *ra-*

evaluation influenced by
abundance of
socially-unmeaningful *ra-*

g-

nothing comparable to
influence its evaluation

How are these variables evaluated?

negated ra- g-
this is but one path to this idea
evaluation influenced by others? nothing comparable to
abundance of influence its variation

socially-unmeaningful ra-

Here's what Rwandans say about these variables.
Is this how they use them?

negated *ra-* is
Northwestern,
young, and not
gendered

g- is
Northwestern,
stigmatized, and
not gendered

Here's what Rwandans say about these variables.
Is this how they use them?

negated *ra-* is

g- is

Northwestern,
young, and not
gendered

nope!

a sneak peek →

Northwestern,
stigmatized, and
not gendered

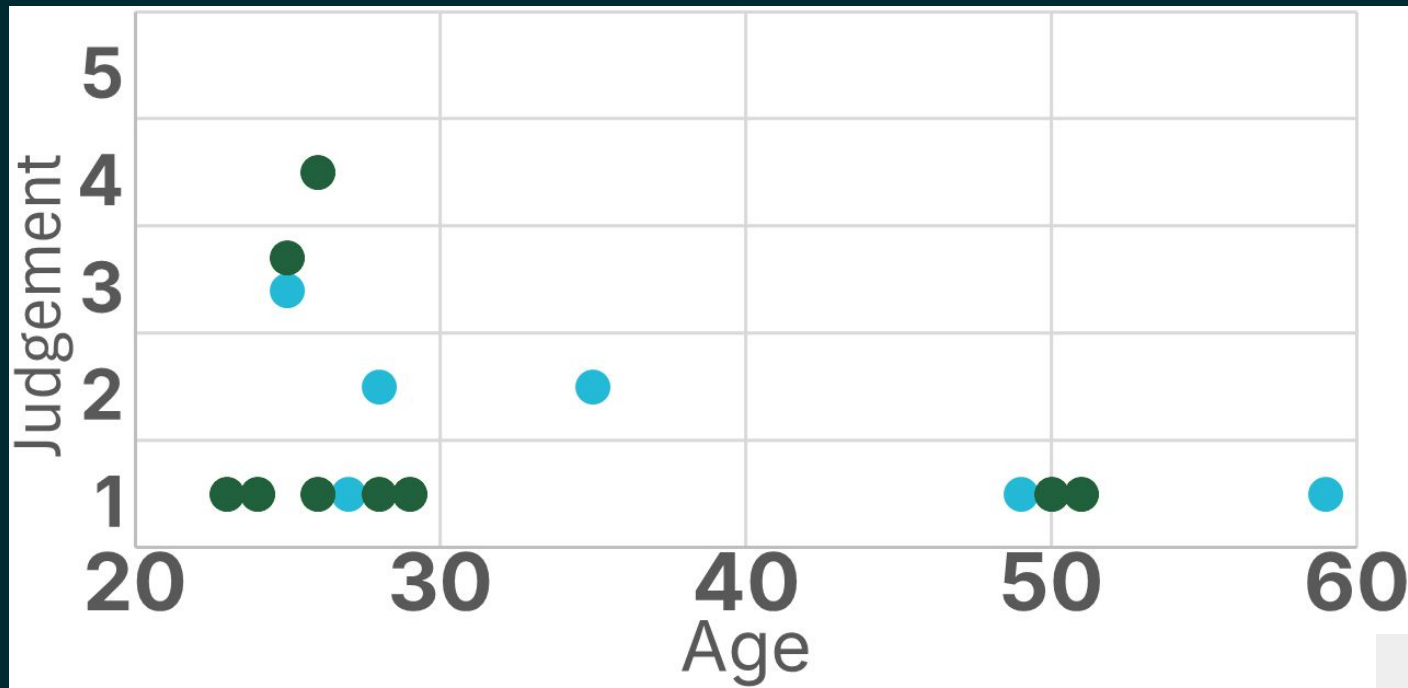

negated *ra-*

N = 65

young women more likely to use negated *ra-*
($\beta = 0.035$, $p = 0.022$)

no effect of region here, but...
regional effects found for *ra-* in other, less frequent environments

$g-$
no apparent predictors
(but stigma could have lowered self-reported use)

(N=15)

5 = would always use
1 = would never use
● Northwest
● Elsewhere
(coded by location
ages 5-17)

There's more!

Ask me about...

what do Rwandans say?

N=65 usage survey about *ra*-grammatical change led by young women, Northwest
mediated by frequency of morphosyntactic environment

why are ideologies different from use?

default categorization? (Weissler & Brennan 2020)

Murakoze!

‘Thank you!’
